Course Development

2018 — **DS 202**, *Data Acquisition and Exploratory Data Analysis.*, Developed new course. Required class for the minor and major in the DS program.

2018 — **Stat 480**, *Applied Statistical Computing*, Change of material to streamline with new material in Stat 479

2016 — **Stat 528**, *Visual Business Analytics*, online-only course, prep time 1000h (one-thousand, not a typo), students pre-req is enrollment in the Master of Business Analytics. It would make sense to change that pre-requisite to all students from graduate programs outside of statistics.

2012–2023 — **Stat 585**, *Data Technologies in Statistics*, initially with D. Cook, now by myself: this course is going over methods and tools for good practices in statistical computing. This has been an area of rapid advancements over the last ten years, making rather deep changes to the material necessary for each course iteration. Team-taught with S. VanderPlas in 2019.

2011 — **Stat 490**, *Data Visualization Competition for the DOT*, 2 projects for DOT challenge: visualizing transportation data safety (6 students), visualization of state regulations regarding DUI convictions and effects on rate of fatal accidents. Economics (1 student): visualization of effect of wind patterns on efficiency of airports

2009–2014 — **Stat 579**, *Introduction to Statistical Computing*, re-worked and extended material taught: data centered modules with lab components with a strong emphasis on working with real (and occasionally large) data and problem solving techniques.

2008–2011 — **Stat 430**, *Statistics for Computer Scientists*, with Bill Duckworth: statistics for CS graduate students (first taught in Spring 2006 by Arka Ghosh); by now this course has evolved to serve entry-level graduate students from BCB, Computer Science and Computer Engineering.

2007 — **Stat 690F**, *Special Topics in Statistical Graphics*, with D. Cook, reading-based course on statistical graphics. We have been discussing a wide range of statistical graphics: visual perception, statistical testing of effective displays, multidimensional graphics, interactive statistical graphics, elements of data exploration, grand tours and projection pursuit.

2006 — **Stat 503**, *Exploratory Methods and Data Mining*, Added material on categorical data: measures of associations and use in algorithms, such as association rules. Added material on large databases.

2006–2016 — **Stat 332**, *Visual Communication of Quantitative Information*, with D. Cook and Charles Kostelnick (English): undergraduate course (with graduate credit), team-taught for the first time in Spring 2006
